Aluminum Decks

Multi-family buildings rely on safe and code compliant deck systems. Aluminum boost architectural value and can withstand harsh weather conditions for years without maintenance. PermaCorp's deck system is fully customizable to exact jobsite specifications based on our engineers Project Specific Engineer Calculation Report.

Customized

All of our products are manufactured to project specifications to ensure safety and compliance. Prior to fabrication, our skilled engineers will provide a stamped engineered shop drawing. PermaCorp's shop drawing ensure our product is manufactured to exact project specifications for easy installation.

Durability

With our rigorous pre-treatment and powder-coating process, our aluminum products stand strong against corrosion. We manufacture our aluminum products with heavy-duty architectural grade alloys which allow for a long-lasting system that spans over a considerably large area.

Easy Installation

Installing our mechanically fastened aluminum products will greatly minimize the risk of costly project setbacks, while still achieving a modern architectural enhancement. During field fabrication, they are easily modifiable for a smooth and simple installation process.
